

The background features a light blue gradient with various financial and data-related graphics. On the right, there is a circular chart with a network of nodes and lines, and numerical values: 207.70, 24.27, and 18.92. In the center, there are several overlapping, semi-transparent blue shapes resembling stylized hills or data peaks. Faintly visible in the background are other numbers like '20' and '0', and a date range 'May - June' at the bottom right.

ZEN E-ORDERS

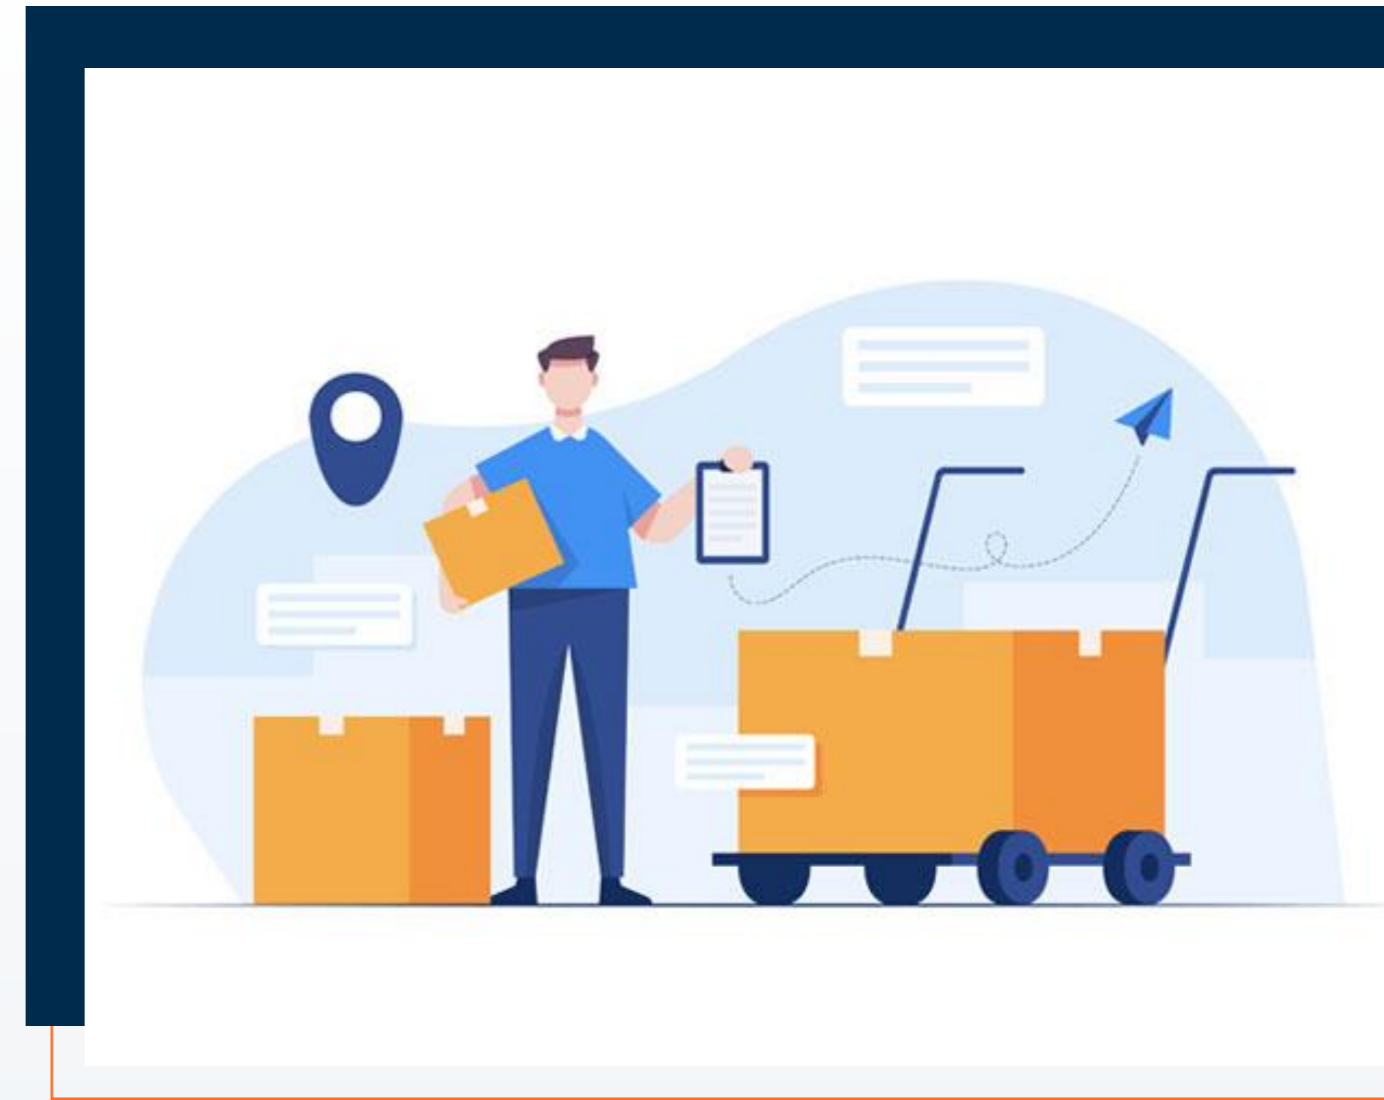

Receive and send orders and other related documents in electronic format.

interzen[®]

**Microsoft

Zen E-Orders, receiving and sending electronic orders made easy.

Zen E-Orders is designed and developed as a platform that, being integrated with Interzen Gateway, is able to receive and send electronic orders through both PEPPOL network (Pan-European Public Procurement On-Line) and the Italian Nodo Smistamento Ordini (NSO).

CHALLENGES

The goal is to intercept orders from public administrations and copy data inside them into the supplier's ERP; this avoids complex and difficult management of the order.

IDEAL SOLUTION

- Key points:
- Receiving and sending electronic orders on the NSO Italian network;
 - Receiving and sending electronic orders on the European network PEPPOL;
 - Data extraction from received electronic orders;
 - Integration with ERP for data export from received orders.

DESIRED OUTCOMES

Help suppliers load orders (from both NSO Italian network and the European network PEPPOL) in an easier, more streamlined and fool-proof way, from the intermediary Interzen onto their ERP.

ZenE-orders

ZEN E-ORDERS WS (Web Services)

ZEN E-ORDERS WS is the electronic orders solution integrated via web services with ERP vendors.

This way, it is possible to use the Interzen Gateway for receiving and sending electronic orders directly to the ERP.

1

ACCESS POINT

Interzen is Peppol Access Point and Service Metadata Publisher: it can register/track both public administrations and private companies as senders/receivers.

2

INTERZEN GATEWAY

Interzen, through its ZEN E-ORDERS WS, can send and receive orders on both PEPPOL network and the Italian Nodo Smistamento Ordini (NSO).

3

ERP INTEGRATION

Thanks to its web services, ZEN E-ORDERS WS is able to both load received orders onto the ERP, and send orders generated from the ERP.

Zen E-Orders & Microsoft Azure

Zen E-Orders is a web application provided as SaaS. Therefore, data protection and information security become crucial. This led Interzen to select Microsoft Azure, one of the best Cloud Service Platforms actually available on the worldwide market.

DOCUMENT DATA

ZenDMS is configured to protect stored documents through different cyber security measures.

SMARTWORKING

ZenDMS can be accessed by different devices (laptop at the office, PC at home, tablet in out of office events).

CYBERSECURITY

Microsoft Azure complies with the widest range of legal and regulatory standards in industries and geographic areas.

Customer success: integration of Zen E-Orders with ERP to streamline exchanging orders.

Zen E-Orders is able to connect the intermediary NSO and the ERP of the supplier, in order to make it easier and more streamlined to load the orders coming from the intermediary onto the ERP.

1. Zen Provisioning

- a) The customer operating the ERP is registered on Zen Provisioning with its administrative data.
- b) As a Service Metadata Publisher, Zen Provisioning provides these data to the PEPPOL network.

2. Zen E-Orders to Interzen Gateway

Document flows can be of two directions:

- a) **Outbound.** ERP exports outgoing XML orders to Zen E-Orders via its web services (API rest).
- b) **Inbound.** Zen E-Orders exports incoming XML orders to the ERP via the same web services.

3. Interzen Gateway to PEPPOL/NSO

Document flows can be routed onto two different networks:

- a) **Italian network.** NSO (Nodo Smistamento Ordini)
- b) **European network.** PEPPOL (Pan-European Public Procurement OnLine)
